DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on June 20, 2008 has been entered.

Response to Arguments

2. Applicant's arguments with respect to claims 20, 21, 27, and 28 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 20, 21, 27, and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lauffenburger et al (US Patent 6,661,774 B1) in view of Sethuram (US Patent 6,058,114).

Regarding to claims 20, 21, 27, and 28, Lauffenburger discloses a virtual output queuing controlling device 12 (fig. 1) in an input buffering switch with a virtual output queuing technique, comprising a first class for a CBR traffic 14 (fig. 1 col. 10 lines 58-

67); a second class 14 for the other traffics than the CBR traffic (fig. 1 col. 10 lines 58-67); a cell read-out controlling section 20 that reads out cells from each of said classes (fig. 1 col. 3 lines 44-53); and a connection request generation section 16 that makes a connection request for a switch scheduler 24 (fig. 1 col. 3 lines 41-44), which can execute a priority control, characterized in that, when said connection request generation section received connection request from said switch scheduler, said cell read-out controlling section is a section that reads out the cells from said first class prior to said second class (col. 3 lines 54-61 and col. 11 lines 3-11).

Lauffenburger fails to teach of a specialized class for only CBR traffic.

However, Sethuram discloses a method and apparatus for prioritizing and scheduling ATM cells comprising a specialized class 921 for only CBR traffic (fig. 13 col. 13 lines 51-58).

Thus, it would have been obvious to a person of ordinary skill, at the time of the invention, in the art to employ such specialized class of service as taught by Sethuram into Lauffenburger's system since CBR traffic have a very strict rules for the amount of delay tolerated.

Allowable Subject Matter

5. Claims 22 and 23 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
6. Claims 1-19, 24-26, and 29-88 are allowed.
